

Date: April 15, 2026

To: Eaton's Bussmann Business and Eaton's BCM & BMM Fuse Block Customers

Subject: Material Resiliency for Bussmann series BCM & BMM Fuse Blocks

Dear valued customer:

Description of Change

As part of our continuous improvement and manufacturing resiliency initiatives, Eaton Bussmann has completed validation of an additional screw for use in selected Bussmann series Class CC & Supplemental Fuse Blocks.

Effective immediately (Week 16), these products may be manufactured using either of the two approved screw drive shapes, i.e., Phillips slotted or Phillips.

Reason for Change

The addition of an alternate screw material increases material availability and supply chain flexibility, enabling Eaton to better support market demand and customer requirements.

Impact to Product

This change does not affect:

- Torque
- Fit, form, or function
- Electrical performance
- Product ratings or certifications
- Ordering information or part numbers

Products manufactured with either screw drive shape (i.e., slotted Phillips or Phillips) are fully compliant with existing specifications and quality standards.

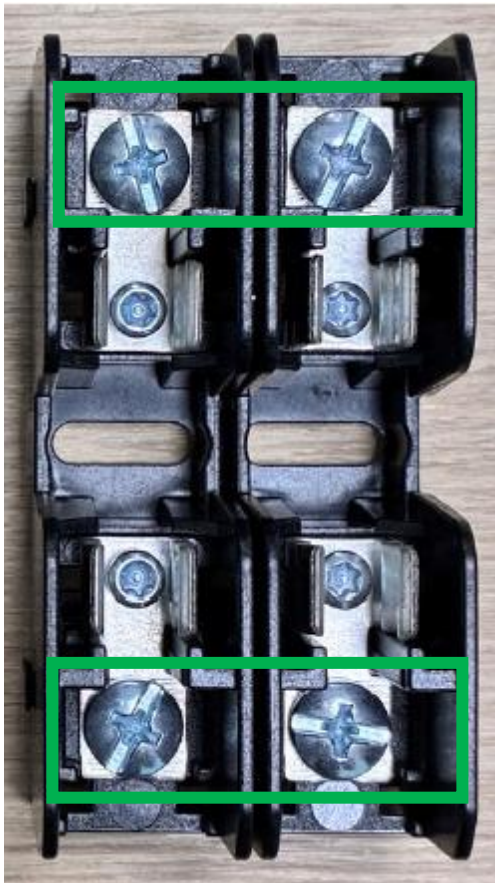

No customer action is required. Customers may receive products with either of the two screw drive shapes as inventory transitions.

Affected Products

The SKUs validated for use with the new Phillips screw drive shape are listed in the table below.

An example image of a product featuring the Phillips screw drive shape is also provided for reference.

Catalog Number	Description	UPC Code
BCM603-1S	CC FUSE BLOCK W/ SCREW 1 POLE	051712486750
BCM603-1SQ	CC FUSE BLOCK W/ SCREW & QC 1 POLE	051712486361
BCM603-2S	CC FUSE BLOCK W/ SCREW 2 POLE	051712486347
