To: Rotary Disconnect Switch Customers

Subject: Transition to new line of Cooper Bussmann disconnect switches

We are pleased to announce the new line of Cooper Bussmann disconnect switches and versatile accessories. Included in the new line are UL489 and UL98 fused disconnect switches from 30A to 800A and UL508 and UL98 non-fused disconnect switches from 16A to 1200A. Open and enclosed switches are offered for a complete line of load break disconnect switches to serve as main disconnect, provide branch circuit protection or handle equipment motor loads.

Transition to new disconnect switch line and phase-out of current offering

In a proactive approach to provide you with better service for your disconnect needs with improved lead-times for the most common disconnect switches and accessories, we are transitioning our existing legacy rotary disconnect line to this new product line. The current offering is discontinued effective immediately. Made-to-stock items will be offered for 60 days or until inventory is consumed. Made-to-order items will be obsoleted immediately and our new switch line will be offered. Please see the following pages for information on specific part numbers. Note that parts from the new line and previous lines cannot be interchanged.

To simplify this transition, an online cross-reference tool is available to help you identify part numbers from the new line that replace the previous offering. This cross-reference tool can be found at www.cooperbussmann.com/CrossRef. If you have any questions or comments, please contact your local Cooper Bussmann Sales Representative or our Customer Satisfaction team at busscustsat@cooperindustries.com. For technical questions on the new disconnect switch line please contact our Applications Engineering team at fusetech@cooperindustries.com. We appreciate your continued support and look forward to providing you and your customers with innovative circuit protection solutions in the future.

About the new disconnect switch line

The new line of disconnect switches allow your customers to continue enjoying the high level of circuit protection expected from Cooper Bussmann products while significantly increasing versatility. Most disconnect switches can be operated with a front, side, flange or direct mount handle, which increases flexibility of use and reduces inventory. Handle kits are available for all fused disconnect switches to satisfy the requirements for NFPA 79 applications. Other new features include SCCR options of 100kA and 200kA for 30A & 60A Class J fused disconnect switches and options of 25kA and 100kA for 100A non-fused disconnect switches, and direct on-switch lockout points for most switches.

The enclosed disconnect switches offer a full range of solutions available in NEMA Type 1, 3R, 4, 12, 4X Stainless, and 4X Plastic enclosures for a broad range of application environments. Whether the application is motor disconnect, general purpose or main disconnect, this broad line of enclosed fused and non-fused disconnect switches up to 1200A offers the breadth and availability to ensure the right configuration is readily available. Multiple field installed accessories, including switched 4th poles, terminal shrouds, lugs and auxiliary contacts enhance the enclosed disconnect switches to fit the desired application.

In an effort to continue providing great service, we will offer our QuikShip service for the most common disconnect switches with a 24hr delivery service. Contact our Customer Satisfaction team for details.

Thank you.
Kristine Cleary
Senior Product Manager

Discontinued part numbers

The following list contains the discontinued part numbers, stock type and UPC.
